Veterinarian Recommended

Git'Um Fed™ Automated Animal Feeder

Horizon Design & Manufacturing has developed a product that assists in the feeding of pets and animals. Animal owners would agree that feeding takes a large portion of their time and effort in their role as caregivers. The **Git'Um Fed Automated Animal Feeder** frees up their time by assisting in this feeding chore. Also, it helps avoid health and digestive problems by feeding animals several times a day in small quantities, as recommended by veterinarians.

The **Git'Um Fed Automated Animal Feeder** is a fully programmable indoor/outdoor food dispenser. It will feed animals on time, every time, in the quantities they require - up to eight times a day. It dispenses any type of dry food through its patented delivery mechanism which is virtually clog-proof and very quiet - so as not to disturb or frighten animals. Its large capacity extends the time between refills and in high volume cases, can be expanded by the addition of optional extension housings. A larger capacity version is also available. Other available options help to create a truly universal dispenser that will serve in many situations.

Feeds All Types Of Animals

Accessories
